
(a) truth NCD (primary), r = Stage 1 rule
64 calibration graphs, 1792 instances
oracle damping α*
h at the Stage 1 r
(b) same points; grey lines join each graph's perturbation series
corr(h, alpha*): pooled -0.04
within graphs -0.30
between graph means +0.29
h at the Stage 1 r
Exp. A: sparsity
Exp. B: new pages
clip-linear LS: alpha = clip(0.803 -0.021 h_rule, 0.40, 0.99)
clip-linear tau-opt.: alpha = clip(0.810 -0.000 h_rule, 0.40, 0.99)
isotonic: isotonic step function of h_rule
best constant: alpha = 0.810
alpha0 = 0.85 (Stage 1)
alpha = 0.95 ([NG13] experiments)
mean of each graph
(c) alpha-free truth TOT: TotalRank = RAPr Beta(1,1)
r = Stage 1 rule
oracle damping α*
h = 1/n Σ_v |1 − Σ_in(v)| at the Stage 1 r
Exp. A: sparsity
Exp. B: new pages
clip-linear LS: alpha = clip(0.533 -0.099 h_rule, 0.40, 0.99)
clip-linear tau-opt.: alpha = clip(0.561 -0.129 h_rule, 0.40, 0.99)
isotonic: isotonic step function of h_rule
best constant: alpha = 0.480
alpha0 = 0.85 (Stage 1)
alpha = 0.95 ([NG13] experiments)
(d) alpha-free truth Q: latent quality q (walk-free)
r = Stage 1 rule
h = 1/n Σ_v |1 − Σ_in(v)| at the Stage 1 r
Exp. A: sparsity
Exp. B: new pages
clip-linear LS: alpha = clip(0.960 +0.013 h_rule, 0.40, 0.99)
clip-linear tau-opt.: alpha = clip(0.939 +0.093 h_rule, 0.40, 0.99)
isotonic: isotonic step function of h_rule
best constant: alpha = 0.990
alpha0 = 0.85 (Stage 1)
alpha = 0.95 ([NG13] experiments)
